The Creative Economy- John Howkins 2002-06-27 Britain makes more money from music than from its car industry. In the United States the core copyright industries achieved foreign sales and exports of $60.18 billion - a figure which surpasses, for the first time, every
other export sector, including automobiles, agriculture and aircraft. Howkins sets out to explore how we can harness creativity and the industry it sustains to our common interests. This book is not about information and the information society. It is about more basic matters, what we humans want and what we are good at.

#Girlboss-Sophia Amoruso 2015 The New York Times bestseller Sophia Amoruso spent her teens hitchhiking, committing petty theft, and dumpster diving. By twenty-two, she had resigned herself to employment, but was still broke, directionless, and working a mediocre day job she’d taken for the health insurance. Eight years later, she is the founder, CEO, and creative director of Nasty Gal, a $100 million plus online fashion retailer with more than 350 employees. Sophia’s never been a typical CEO, or a typical anything, and she’s written#GIRLBOSS for outsiders (and insiders) seeking a unique path to success, even when that path is winding as all hell and lined with naysayers. #GIRLBOSS proves that being successful isn’t about how popular you were in high school or where you went to college (if you went to college). Rather, success is about trusting your instincts and following your gut, knowing which rules to follow and which to break.

The Knowledge-based Economy-Loet Leydesdorff 2006 "Challenging, theoretically rich yet anchored in detailed empirical analysis, Loet Leydesdorff's exploration of the dynamics of the knowledge-economy is a major contribution to the field. Drawing on his expertise in science and technology studies, systems theory, and his internationally respected work on the 'triple helix', the book provides a radically new modelling and simulation of knowledge systems, capturing the articulation of structure, communication, and agency therein. This work will be of immense interest to both theorists of the knowledge-economy and practitioners in science policy." Andrew Webster Science & Technology Studies, University of York, UK

This book is a ground-breaking collection of theory and techniques to help understand the internal dynamics of the modern knowledge-based economy, including issues such as stability, anticipation, and interactions amongst components. The combination of theory, measurement, and modelling gives the necessary power with which to address the complexity of modern networked social systems. Each on its own would partly illuminate an innovation...
system, but the combination sheds a far brighter light." Mike Thelwall Information Science, University of Wolverhampton, UK

"The sociologist Niklas Luhmann is considered one of the few social scientists possibly able to explain a decisive event once it has happened. In this book, Loet Leydesdorff answers the challenge to take Luhmann's analysis one step further by introducing anticipation into the theory. This book provides a fascinating exploration of the use of recursion and incursion to model social processes." Dirk Baecker Sociology, Universitat Witten/Herdecke, Germany

How can an economy based on something as volatile as knowledge be sustained? The urgency of improving our understanding of a knowledge-based economy provides the context and necessity of this study. In a previous study entitled A Sociological Theory of Communications: The Self-Organization of the Knowledge-based Society (2001) the author specified knowledge-based systems from a sociological perspective. In this book, he takes this theory one step further and demonstrates how the knowledge base of an economic system can be operationalized, both in terms of measurement and by providing simulation models."
